

# New Crypto for SocialFi

## MAXETER WHITEPAPER

MAXETER is a digital currency and is revolutionizing the technology industry which has developed very quickly. Apart from being a digital currency, Maxeter aims to build a sustainable and versatile ecosystem to meet the needs of every member in the form of the SocialFi Platform.

## Introduction

### 1.1. What is Maxeter

Maxeter is a secure digital currency combined with ease of use, Maxeter is a revolutionary digital currency that can support the SocialFi Platform

### 1.2 What is SocialFi

SocialFi is a platform developed by Maxeter and combines the principles of social media and decentralized finance (DeFi). The SocialFi Platform offers a social media platform that can create, manage and generate content by its participants.

# Overview

## 2.1 Launch and Purpose

In this digital era, Maxeter has the aim and purpose of building a platform that can be integrated with blockchain. Maxeter has Proof of Work (POW) and Proof of Stake (POS) functions.

## 2.2 Proof of Work (POW)

Maxeter is a digital currency that can be mined and is CPU-based. Even though it is CPU based, Maxeter can also be mined using a GPU.

## 2.3 Proof of Stake (POS)

Apart from being able to mine, Maxeter has a proof of stake feature called smartnode in it. Users can do this in their respective wallets to stake or in other words participate in smartnode.

# Ecosystem

## 3.1 Ecosystem Goals

Blockchain, MAXE, SocialFi are a series that we will develop in a social media project. SocialFi is a social media that has many features including: Content Sharing, Chat Features, Groups, Media Album, Profile Features, AI Avatars, Feed Features, Music Players, Advertising and many more.

## 3.2 Future Expansion

Global developments are very fast and digitally, we want to carry out a transformation with the platform that we will develop by offering sustainable services and adapting to the market.

# Roadmap

## 4.1 Blockchain System

Maxeter is a digital currency based on proof of work (POW) and proof of stake (POS) whose users can choose to get coins (MAXE). Maxeter blockchain has Instansend and private send features which can carry out transactions quickly, safely and more privately, apart from that our proof of stake system can also be called a smartnode which has to increase platform security and transaction efficiency.

## 4.2 Market Creation

SocialFi will be developed and become a platform where users can carry out activities on social media. Apart from that, users can also get MAXE coins in activities on the SocialFi Platform that we will develop.

SocialFi users can get MAXE coins from every post they make, or can also get them while live on the SocialFi Platform. Apart from that, users can also get coins from showing advertisements.

## 4.3 Implementation and Integration

The development team will work to create, implement and refine the SocialFi Platform to ensure that the envisioned mechanisms can be utilized properly.

## 4.4 Market Development

The ecosystem will be further developed to provide a smooth and safe experience for users.

## 4.5 Improved wallet and explorer

The developer will continue to improve its wallet and blockchain explorer to provide users with an improved experience and faster, safer and more efficient access to their transactions.

### 4.6 Community Development and Outreach

Together maxeter has the potential to create a sustainable and profitable ecosystem for businesses, communities, investors, and developers.

# Security and Privacy

## 5.1 Secure transactions

Maxeter uses advanced cryptographic techniques, leveraging a decentralized network and consensus mechanism, ensuring that transactions are resistant to fraud and censorship.

## 5.2 Privacy

Although Maxeter does not provide the same level of privacy as privacy-focused cryptocurrencies like Monero, our blockchain system still offers a reasonable level of privacy by using pseudonymous addresses for transactions. Users can take further steps to protect their privacy by using multiple addresses and practicing good operational security.

# Economic Models

## 6.1 Coin distribution

MAXE is distributed through smartnode and mining rewards mechanisms. This distribution method ensures a fair allocation of participants in the ecosystem, incentivizing holders and miners to contribute to the growth of the platform.

# Challenges and Potential Solutions

## Market Adoption and Penetration

To achieve widespread adoption, development teams need to overcome barriers to entry and create a compelling value proposition for miners, developers, and other stakeholders. By perfecting the Proof of Stake mechanism, expanding the ecosystem, and building strong partnerships, our development can increase its market penetration and position itself as a leading platform.

In conclusion, our project represents a new approach to integrating blockchain technology into the SocialFi Platform. As the platform continues to grow and develop, the development of our project has the potential to reshape the ecosystem by providing new opportunities and rewards for Influencers, users, and other stakeholders.

# Tokenomics

The blockchain tokenomics model is designed to support a balanced and sustainable ecosystem by distributing rewards among smartnodes, Proof of Work (PoW) miners, and developers. tokenomic model is as follows:

## Coin Distribution

- 60% Smart nodes (PoS)
- 35% Proof-of-Work (PoW)
- 10% Development

## Fund Development Distribution

- 60% Development
- 15% Exchange listings
- 10% Marketing
- 10% Other Expanses
- 5% Socialfy

*This whitepaper outlines the core principles, technical aspects, and roadmap of Maxeter*
